

Zoho Implementation Specialist — Technical Assessment

This step-by-step installation and configuration guide will walk you through setting up the Contact Manager Widget in Zoho CRM.

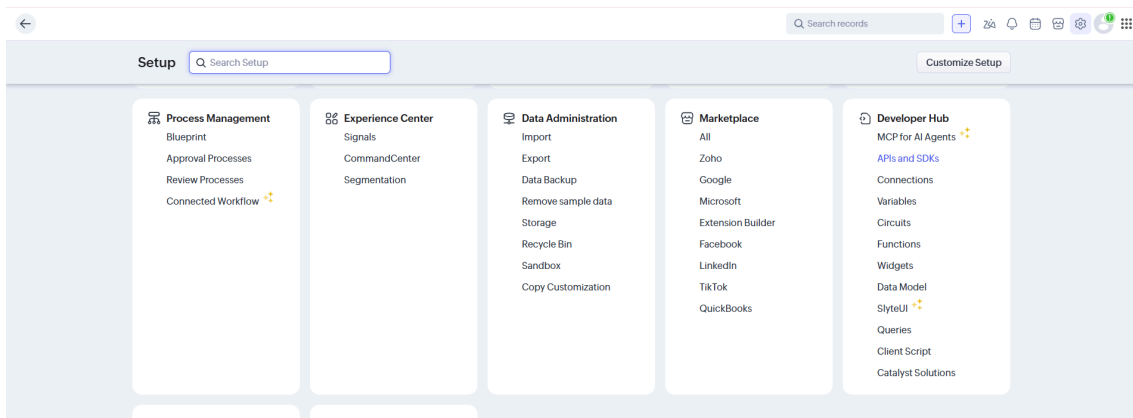

Step 1: Access Zoho CRM Settings

- Log in to your Zoho CRM account with administrator permissions.
- Click the **Settings** icon (gear icon) located in the top-right corner of the top navigation bar.

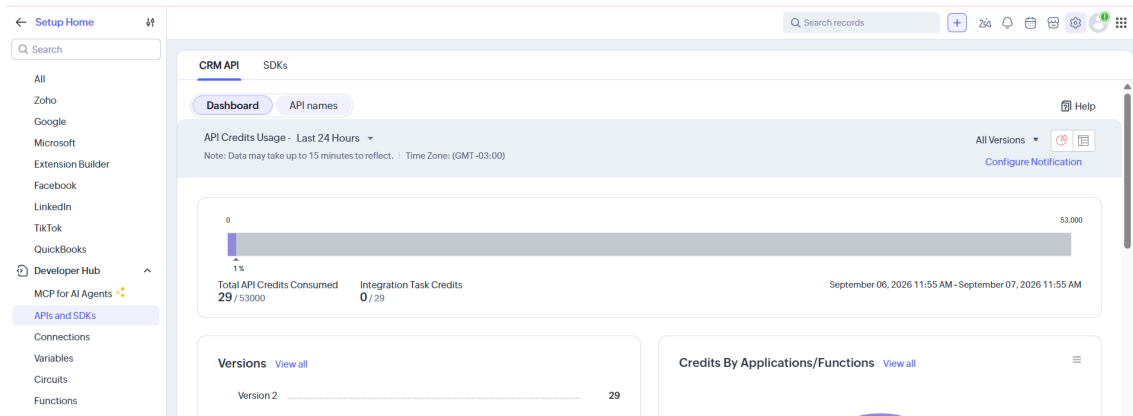

> Settings

> API and SDKs

> API names

> Contacts

CRM API SDKs

Dashboard API names

You can access the necessary API names here to support your integration needs.

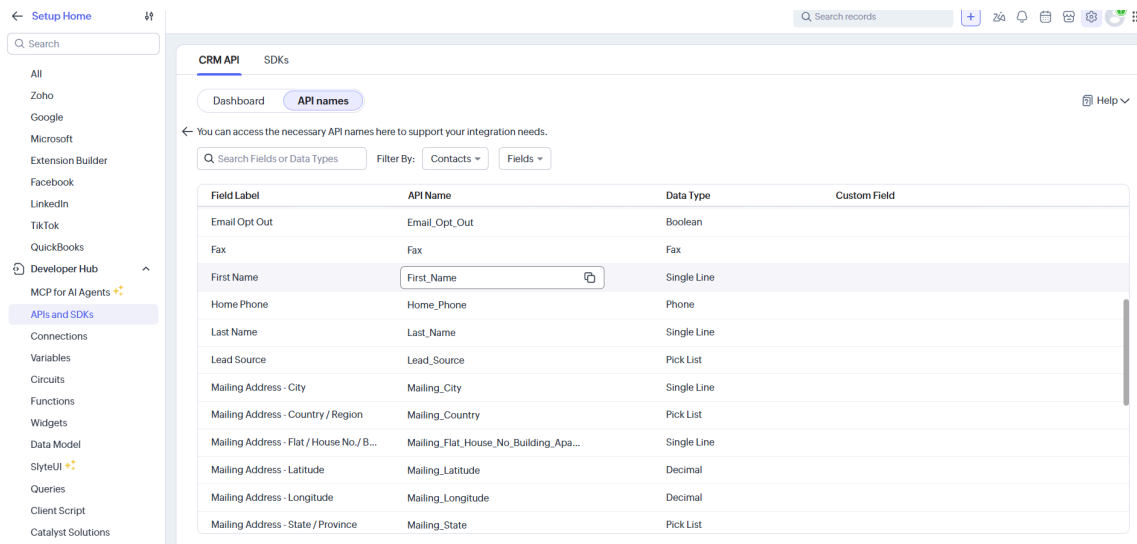

Search Filter By: Modules

[Customized Modules](#)

Displayed In Tabs As	API Name
Workqueue	Workqueue_s
Leads	Leads
Contacts	Contacts
Accounts	Accounts
Deals	Deals
Tasks	Tasks
Meetings	Events
Calls	Calls

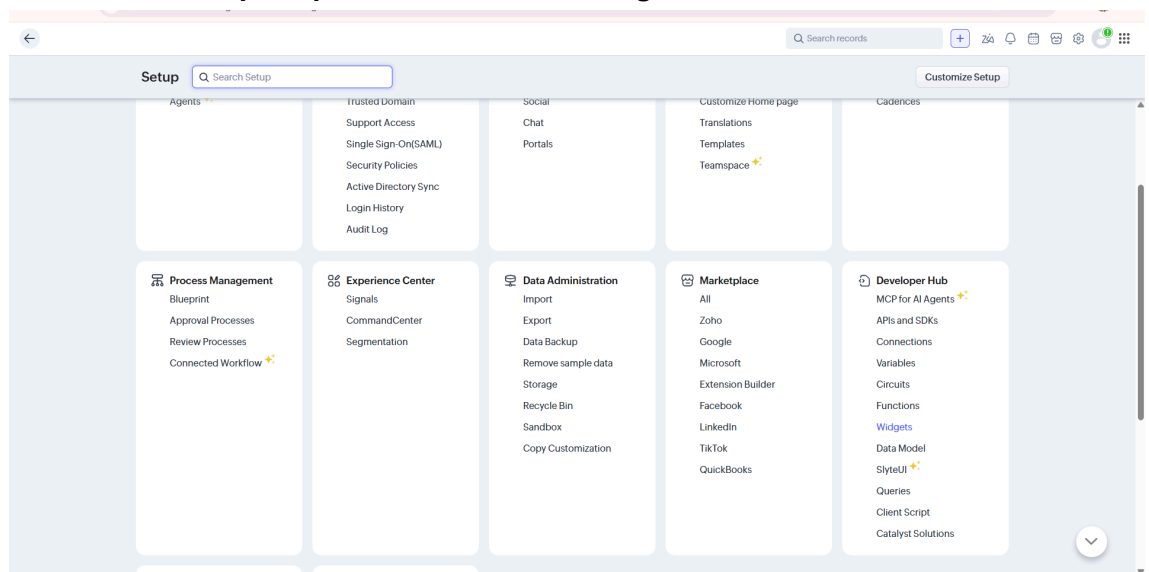

Step 2: Verify Module and Field API Names

- Under the **Developer Space** section, click on **APIs & SDKs** (or go to **Customization > Modules and Fields**).
- Locate and select the **Contacts** module.
- Check the **API Name** column to verify that field API names match the required system format:
 - **First Name** $\rightarrow$ **First_Name**
 - **Last Name** $\rightarrow$ **Last_Name**
 - **Email** $\rightarrow$ **Email**
 - **Phone** $\rightarrow$ **Phone**
 - **Street Address** $\rightarrow$ **Mailing_Street**
 - **City** $\rightarrow$ **Mailing_City**
 - **State** $\rightarrow$ **Mailing_State**
 - **Postal Code** $\rightarrow$ **Mailing_Zip**
 - **Country** $\rightarrow$ **Mailing_Country**

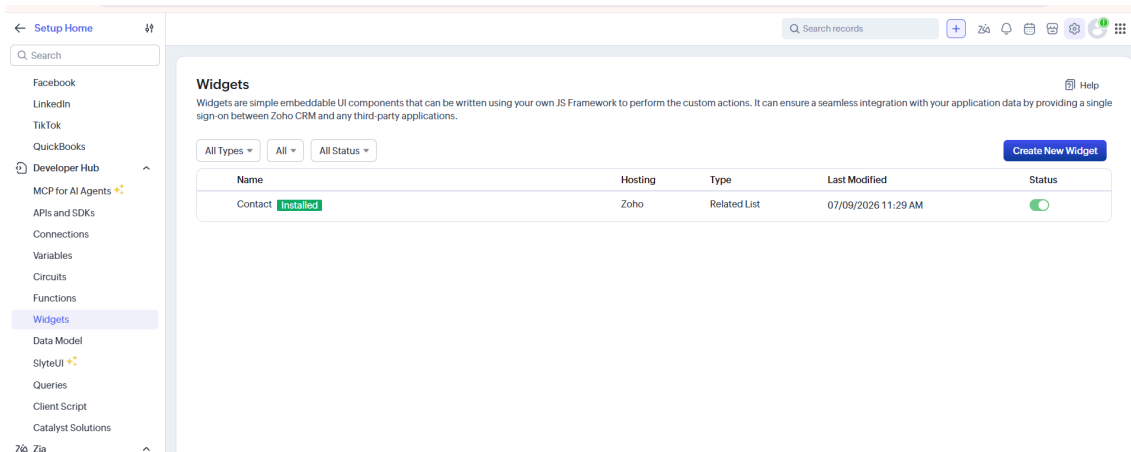

Step 3: Access the Widgets Manager

- Return to the main **Setup** menu.
- Under the **Developer Space** section, select **Widgets**.

- Click the **Create Widget** (or **New Widget**) button.

Step 4: Configure and Upload the Widget Package

- Fill out the widget setup form with the following settings:
 - **Widget Name:** Contact Details Widget *(or your preferred title)*
 - **Widget Type:** Related List
 - **Hosting Type:** Zoho
- Click **Upload File** and select the inner **.zip** package containing the app source files.

Step 5: Add the Widget to the Contacts Related List

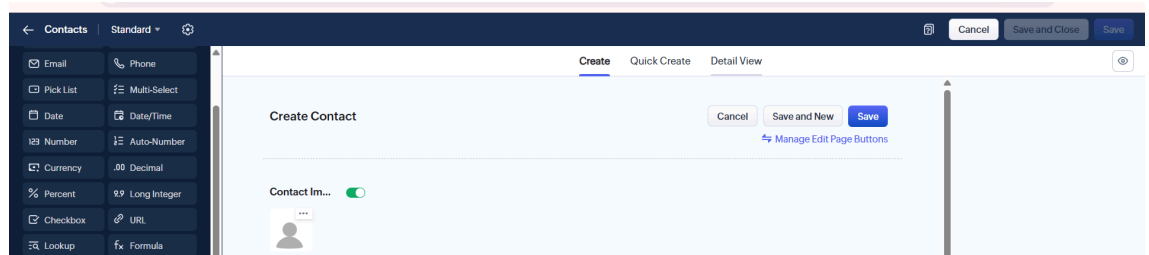

- Go to **Setup > Customization > Modules and Fields**.

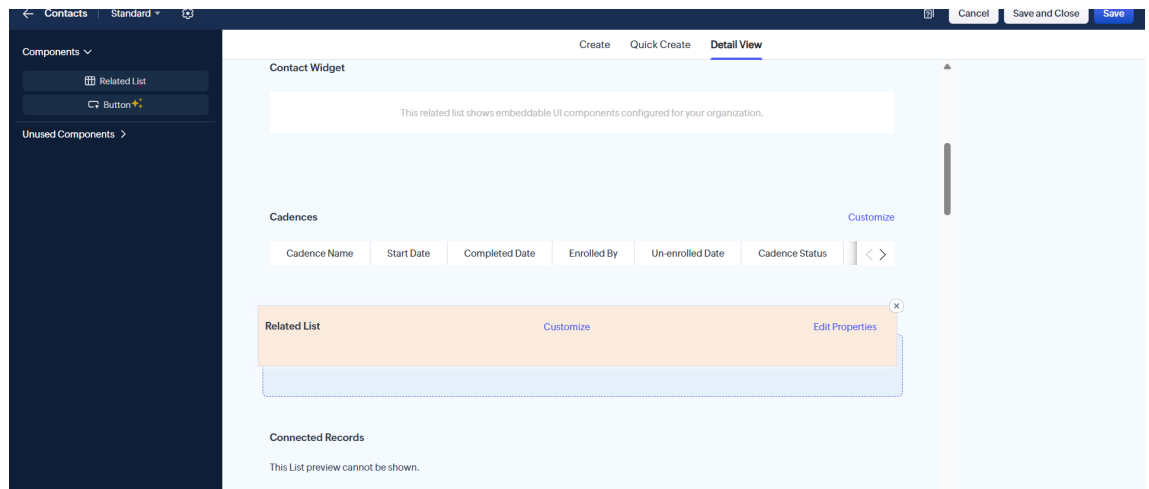

- Click on **Contacts** and select the layout you wish to edit (e.g., **Standard**).

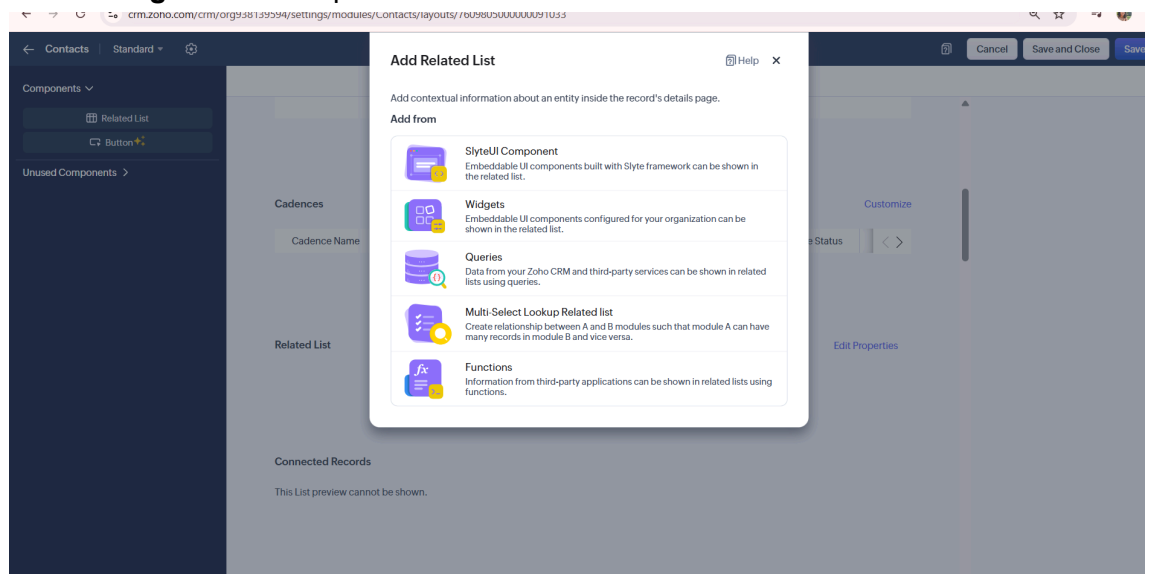

click on Detail View

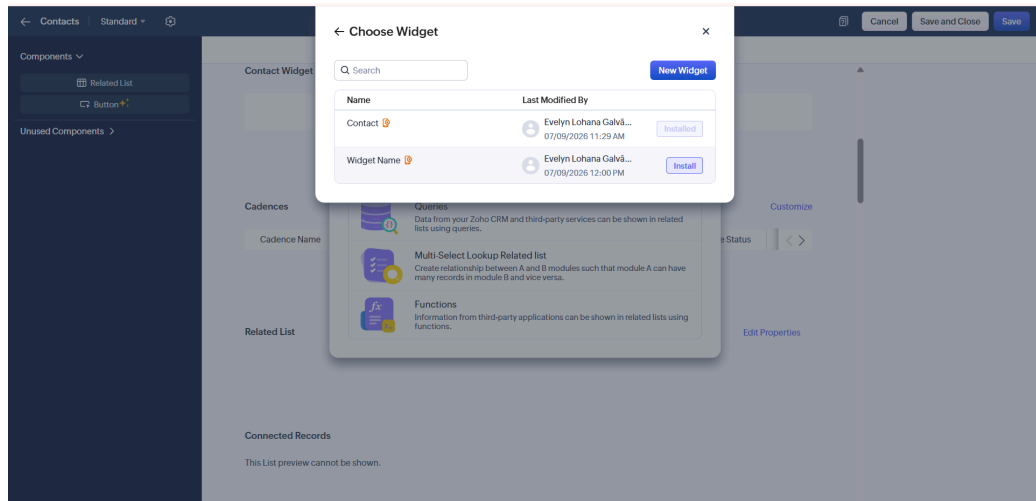

- In the left sidebar menu, scroll to **Related Details** drag and drop a **Related List**.

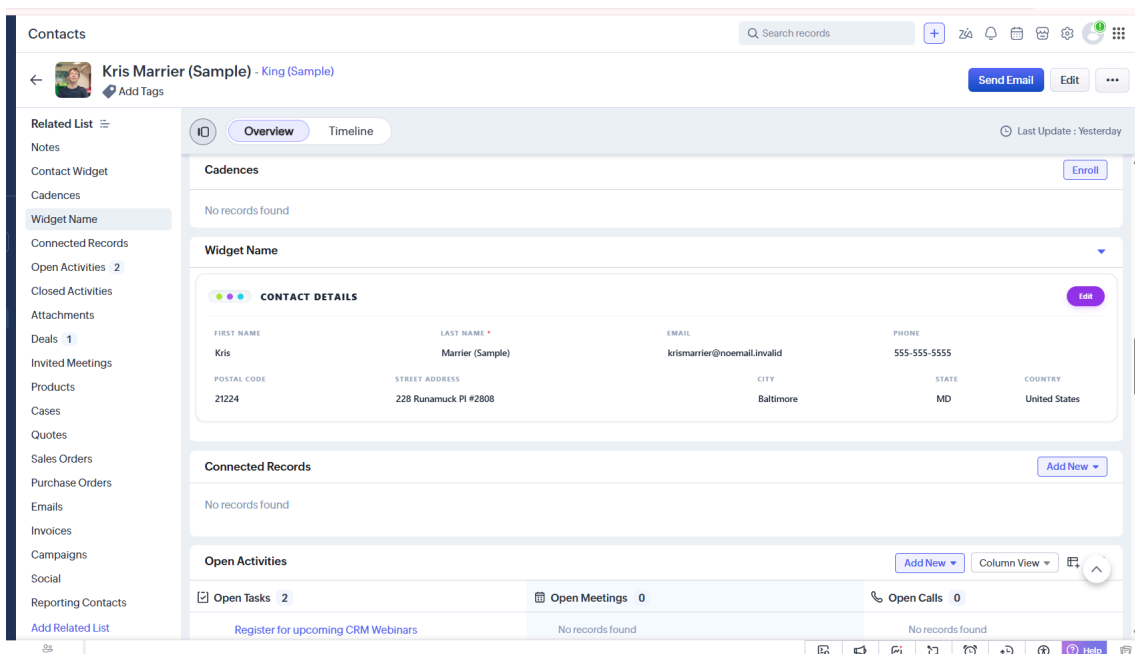

- Select **Widget** from the options.

- Choose your uploaded **Contact Details Widget** and click on install.

- Click **Save** to publish the layout changes.

Postal Code Lookup Integration

Postal Code Lookup Integration (Zippopotam.us API)

The Contact Details Widget integrates the **Zippopotam.us** REST API to provide lightweight, automated address completion for US postal codes.

- **Automated Address Population:** Triggers an async lookup once a valid 5-digit ZIP code is entered into the **Mailing_Zip** field, automatically filling in **City**, **State**, and **Country**.

- **Zero-Configuration Setup:** Uses a public endpoint (`[https://api.zippopotam.us/us/](https://api.zippopotam.us/us/){ZIP}`) requiring no API keys, secret credentials, or paid usage quotas.

<https://zippopotam.us/>

How to use it!

It's JSON! Here is a simple javascript example

```
<script type="text/javascript">
var client = new XMLHttpRequest();
client.open("GET", "http://api.zippopotam.us/us/90210", true);
client.onreadystatechange = function() {
    if(client.readyState == 4) {
        alert(client.responseText);
    };
};

client.send();
</script>
```

JSON Result:

```
{
  "post code": "90210",
  "country": "United States",
  "country abbreviation": "US",
  "places": [
    {
      "place name": "Beverly Hills",
      "longitude": "-118.4065",
      "state": "California",
      "state abbreviation": "CA",
      "latitude": "34.0901"
    }
  ]
}
```
